

Baselining your P6 Projects on a Consistent Basis is a Mandatory Step at Many Companies

But how do you ensure that your Project Managers and Schedulers are creating weekly and/or monthly baselines?

The Answer is P6ETL[®] for Auto Baselining

Overview

P6ETL[®] for Auto Baselining (P6ETL[®]) is a software utility that automatically creates daily, weekly, and/or monthly baselines in your P6 database for all or just a subset of your P6 projects.

P6ETL[®] is a Windows console application that runs on a Windows workstation, VM, or Server. Using the Windows Task Scheduler, P6ETL[®] users can schedule jobs to create baselines for any regular interval and at any time of day, week, or month.

Features

- **Automatic**

Once the jobs are set up, P6ETL[®] will create the baselines without any manual intervention.

- **Setup Unlimited Number of Jobs**

Each job creates baselines for 1 or more projects.

P6ETL[®] users can setup an unlimited number of jobs to create baselines using a variety of regular intervals and filters. For example, the following jobs can be setup at your company:

- Job 1 Create weekly baselines on every Monday at 6am with a Baseline Type of **Weekly Status Baseline** for all Projects assigned a Project Code of **Weekly Baseline**.
- Job 2 Create daily baselines at 10pm every day with a Baseline Type of **Daily Update** for all Projects assigned a Project Code of **Daily Turnaround Baseline**.
- Job 3 Create monthly baselines on the first Tuesday of every month at 1am with a Baseline Type of **Monthly Status Update** for all Projects assigned a Project Code of **Monthly Baseline**.

- **Email Notifications**

P6 users can be notified a few days before P6ETL[®] creates the baselines. P6ETL[®] can notify P6 users based on the OBS, the Project Owner, and/or specific email addresses.

In addition, email notifications can be sent immediately before and immediately after the baseline is created.

Requirements

- **Windows Workstation, VM or Server**

The computer does not need to be a dedicated computer for P6ETL[®] but the computer should be running 24/7. Detail requirements are provided along with a quote.

- **P6 Web Services**

Your P6 environment must be running P6 SOAP Web Services. Web Services are a standard component for the enterprise version of P6.
